

The beamerposter package

Philippe Dreuw, Thomas Deselaers

2008/03/11

The \LaTeX beamerposter package is an extension of the \LaTeX beamer and the a0poster classes in order to create \LaTeX posters, e. g. a DIN-A0 size \LaTeX poster in landscape or portrait orientation. Furthermore it is possible to scale the poster fonts to your needs.

The package allows you to benefit from the nice color box handling and alignment in the beamer class (e. g. with rounded corners and shadows) in order to create quite fast pretty conference posters.

Features:

- scalable fonts using the fp and type1cm packages
- posters in DIN-A0, DIN-A1, DIN-A2, DIN-A3, DIN-A4, and custom sizes like double DIN-A0 possible
- still applicable to custom beamer slides, e. g. 16:9 slides for a widescreen (i. e. 1.78 aspect ratio)
- orientation: landscape or portrait
- debug mode

ChangeLog:

1.07 – bugfixed custom size handling, portrait or landscape settings are ignored now

1.06 – added the type1cm package for scalable math fonts

1.05 – added version check for xkeyval package

1.04 – added custom size handling

1.03 – improved predefined size handling

1.02 – minor bugfixes

1.01 – bugfixed size handling

1.00 – first beamerposter release
